There are many applications on the Internet that you can use in order to make your work easier. One of such applications is Madhavan Function Grapher. It allows you to draw graphs of complicated mathematical functions. It sports a really intuitive and simple graphical interface, with many tools and features at hand. Sleek and intuitive graphical interface The application doesn't take long to install and it doesn't come with

a complicated setup that you would need to complete before you can actually use it. It sports a really intuitive graphical interface with many tools at hand and some nice features. Madhavan Function Grapher allows you to draw graphs of complicated mathematical functions. It has numerous features ranging from simple ones such as scaling and quality adjustment to advanced ones such as plotting the graph of  $dy/dx$ , integrating between two limits and plotting graphs of

implicit functions. Explore various sections Plotting a graph is simple. Type your function into the box provided and click Plot. For non-implicit functions (the default option), you must enter the expression as a function of  $x$ , and the graph of  $y=f(x)$  will be plotted. Function Grapher 2 has many built-in mathematical functions that you can use. For example, to plot the sine wave, type  $\sin x$  (or)  $\sin(x)$  into the box. It also comes with a list of functions that you can check out. To plot implicit

functions, check the Implicit Function box and enter a function of  $x$  and  $y$  into the box. More features and tools The function list includes trigonometric functions:  $\sin$ ,  $\cos$ ,  $\tan$ ,  $\operatorname{cosec}$ ,  $\sec$ ,  $\cot$ , inverse trigonometric functions:  $\operatorname{asin}$ ,  $\operatorname{acos}$ ,  $\operatorname{atan}$ , exponential/logarithmic functions:  $e$ ,  $\ln$ ,  $\log$  and more. Function Grapher 2 can do more than just drawing graphs. You can scale the graph along the  $x$ -axis or  $y$ -axis by using the X Scale and Y Scale options. The

Quality option adjusts the quality of the graph. All in all, Madhavan Function Grapher is a very nice application that you could use in order to draw graphs of complicated mathematical functions. more infodownload Madhavan Function Grapher Version 2.1.1 (x64) | 2.0.0.20 Free Download Madhavan Function Grapher is a professional application that has a very intuitive graphical interface that is so simple and

## **What's New in the Madhavan Function Grapher?**

Madhavan function Grapher is a software to draw graphs of the mathematical functions on screen. The software is developed by Madhavan Software Private Ltd. Madhavan function Grapher has been downloaded by more than 10,000 users all over the world and most of them highly recommend it. Madhavan function Grapher is designed to

provide a simple and intuitive interface for plotting of functions. Madhavan function Grapher allows you to select many different types of functions, such as trigonometric, exponential, logarithmic, power series, hyperbolic, and periodic functions. You can also plot any function using the "Plot" feature. Description: The completely modern, very intuitive and simple Interface, is easy to use and understand. The program is specially designed for graph plotting, but it's not

just a graphing program. If you can create a perfect equation, you can create a graph with this program. The program comes with a total of 7 new functions. The user can easily modify the default functions. The program has been specially designed for mathematical research. It contains several functions such as nth root, quadratic equations, hyperbolic functions, Laurent series, integration, differentiation, and combinations. If you are fond of graphing equations, then this is

the right program for you.
