Another advantage with using these blending options is that you can experiment with them endlessly. You can create a new blend if you wish, paint over the top layer to use a new blending option, and click and drag the blend options to change their strength.

**Paint:** Let's say you want to cover up a small blemish on an object, like a pimple or extra freckle. Click the small paintbrush to access the paint tool. You can use the paintbrush tip to apply a different color to the blemish. Use different size brush tips and change the hardness by hitting the F key on your keyboard. You'll take great care to cover up whatever you have in mind before applying a new color. Or, you can paint over a color to change it. When you're ready to end the pain, hit the Redo key to remove the blemish. And that's the last thing you'll do. If, however, you want to get rid of the blemish once and for all, hit the Delete key. Up until this point, the paint tool has been easy to use. But let's finish up by explaining how to get in the weeds and do more involved edits in Photoshop.

**Dodge and Burn:** Dodge is for reducing the contrast or softening the appearance of an area of an image that might otherwise appear too harsh or bright. Burn is for bringing out the contrast of an area that appears too dark or too bright. The Burn tool can be used to reduce these areas, or you can use it to bring things up. You'll use the Dodge and Burn tools in much the same way as you'd use the shadows or highlights in other applications. When you're finished with the normal blending modes, you can also experiment with the Smudge and Sponge blending options. You can use these to spread a bit of the color from one area to another, for example from a light colored object onto a dark colored one.
